

CURRICULUM VITAE

Ioannis Pavlidis
Eckhard Pfeiffer Professor
Computational Physiology Laboratory, Director

Business Address

University of Houston
306 Health and Biomedical Sciences Center
Houston, TX 77204-3010
Telephone: 713-743-0101
E-mail: ipavlidis@uh.edu
URL: <http://www.cpl.uh.edu>
Google: <http://scholar.google.gr/citations?user=E3oBkwwAAAAJ&hl=en>

Degrees

University of Minnesota, Minneapolis, Minnesota
Ph.D. in Computer Science, December 1996

University of Minnesota, Minneapolis, Minnesota
M.S. in Computer Science, September 1995

University of London, Imperial College, London, United Kingdom
M.S. in Robotics and Automation, February 1989

Democritus University of Thrace, Xanthi, Greece
B.S. in Electrical Engineering (Summa cum Laude), June 1987

Research Interests

Physiological Basis of Human Behavior, Human-Computer Interaction, Mobile Computing, Medical Imaging

Career Highlights in Pictures

Figure 1: Journal/conference publications and patents vs. citation counts; the area of each disk is commensurate to the Impact Factor of the corresponding journal (2015 Journal Citation Reports); the h-index line is dotted.

Figure 2: Funding graph since the inception of the Computational Physiology Laboratory; grant amount for each award was recorded in its entirety at the year the award was made.

Career Highlights in Words

I consider the most important accomplishment in my career the development of a new discipline, “Computational Psycho-Physiology”. In a persistent effort that started in 1999 and continues today, my research has transformed established practices of measuring physiological variables. Probes and wires were replaced with passive imaging, electronic boxes with computers and algorithms, physical measurements with cyber-measurements. The outcome has been transforming sleep studies and psychological evaluations, where persistent and totally non-invasive measurements are required – something that my research brought to life for the first time. Interestingly, these new methods led to discoveries about human nature, not feasible before, such as the localization and understanding of important neurophysiological channels on the face and the role of stress on dexterous skill acquisition. My research has been made possible through the award of a series of highly competitive NSF and DOD grants the last 14 years, totaling over \$10 M. The social implications of my work are reflected in the press (from CNN to Discovery Channel) that it received over time.

I deem as my most important quality, my ability to innovate. Most of my main articles are paradigm shifts and for this reason they typically appear in highly selective journals and conference proceedings.

I consider the most meritorious element of my record, the recognition I received across several disciplines. Testaments to this are my publications in major general science (*Nature* and *Scientific Reports*), medical (*NEJM*, *Lancet*, *SLEEP*), and computer science journals (*IEEE PAMI*, *IJCV*). There are few scientists in general, and even fewer computer scientists in particular, who were able to achieve something similar. It is difficult enough for someone to distinguish himself/herself in a specific area, let alone in other areas, as distinct as the ones I traversed.

My record is complemented with imaginative and successful educational efforts, such as the introduction of the first iPhone course in the country, as well as substantial service to the research community. The latter includes the foundation of successful international conferences (*IEEE AVSS*).

Patents

- XI. I. Pavlidis. "Imaging facial signs of neuro-physiological responses." U.S. Patent No. 8,401,261, issued March 19, 2013.
- X. I. Pavlidis and V. Morellas. "Cooperative camera network." U.S. Patent 7,149,325, issued December 12, 2006.
- IX. I. Pavlidis, M.E. Bazakos, and V. Morellas. "Controlled environment thermal image detection system and methods regarding same." U.S. Patent No. 7,138,905, issued November 21, 2006.
- VIII. I. Pavlidis and J.A. Levine. "System and method using thermal image analysis and slope threshold classification for polygraph testing." U.S. Patent No. 7,111,980, issued September 26, 2006.
- VII. I. Pavlidis. "Near-infrared disguise detection." U.S. Patent No. 7,076,088, issued July 11, 2006.
- VI. I. Pavlidis and J.B. Dowdall. "Near-infrared method and system for use in face detection." U.S. Patent No. 7,027,619, issued April 11, 2006.
- V. I. Pavlidis. "Detection system and method using thermal image analysis." U.S. Patent No. 6,996,256, issued February 7, 2006.
- IV. I. Pavlidis. "System and method using thermal image analysis for polygraph testing." U.S. Patent No. 6,854,879, issued February 15, 2005.
- III. I. Pavlidis, P.F. Symosek, and B.S. Fritz. "Near-IR human detector." U.S. Patent No. 6,829,370, issued December 7, 2004
- II. I. Pavlidis, P.F. Symosek, and B.S. Fritz. "Near-infrared disguise detection." U.S. Patent No. 6,718,049, issued April 6, 2004.
- I. I. Pavlidis, P.F. Symosek, and B.S. Fritz. "Near-IR human detector. " U.S. Patent No. 6,370,260, issued April 9, 2002.

Publications

Books and Book Contributions

- B15. P. Buddharaju and I. Pavlidis. "Physiology-based face recognition in the thermal infrared spectrum." In *Medical Infrared Imaging – Principles and Practices*, M. Diakides, J.D. Bronzino, and D.R. Peterson, editors, ch. 18, pp. 18-1 - 18-16, CRC Press, 2013.

- B14. J.N. Murthy and I. Pavlidis. "Thermal infrared imaging during polysomnography: Has the time come to unwire the 'wired' subjects?" In *Applied Technologies in Pulmonary Medicine*, A.M. Esquinas, editor, pp. 46-50, Karger, 2011.
- B13. P. Buddharaju and I. Pavlidis. "Face recognition under the skin." In *Multibiometrics for Human Identification*, B. Bhanu and V. Govindaraju, editors, pp. 74-92, Cambridge University Press, 2011.
- B12. T. Bourlai, P. Buddharaju, I. Pavlidis, and B. Bass. "Methodological advances on pulse measurement through functional imaging." In *Computational Surgery and Dual Training*, Advances in Pattern Recognition, M. Garbey, B.L. Bass, C. Collet, M. de Mathelin, and R. Tran-Son-Tay, editors, pp. 101-121, Springer, 2010.

Grants and Contracts (Grand Total: ~\$14.6 M)

University of Houston Period (September 2002 – Now) - Total: \$10,749,249

CHS: Medium: Collaborative Research: Managing Stress in the Workplace: Unobtrusive Monitoring and Adaptive Interventions

Role: Principal Investigator

Sponsors: National Science Foundation (grant # IIS-1704682)

Performance Period: 08/01/2017 – 07/31/2020

Funding: \$380,000

Description: Workplace stress is a serious problem that has a direct and negative impact on health, happiness, and productivity. Current approaches for both measuring stress and reducing it are limited; measurements typically rely on self-report or obtrusive sensors, while people often don't seek treatment until the stress has built to dangerous levels (or at all, if they are afraid of other people's judgments). This project's goal is to develop methods both to detect stress and provide personalized relaxation exercises, in real time and in the work context. To detect stress, the research team will study how well data from commonly available devices at work such as webcams, fitness trackers, and keyboards can predict individuals' stress levels. To reduce stress, the team will develop a suite of brief relaxation exercises and a system that uses predicted stress levels to recommend different exercises, learning over time which ones work best for a particular person. These predictive models and interventions will be tested in a long-term study in a real office environment, both validating the work and providing direct effects on experimental participants' well being. The project will also have direct educational impacts for groups underrepresented in STEM fields and generate anonymized datasets that other researchers can use.

The team will develop experimental methods to reliably extract stress cues from commodity devices, using a suite of cognitive tasks that represent knowledge work and typical workplace stressors (e.g., time pressure, noise, distractions). Participants will perform the tasks and experience stressors while the team collects behavioral data from the commodity devices and ground truth stress measurements using physiological signals derived from thermal imaging. The team will evaluate how well features derived from the sensed behavioral data, using different sets of devices, can predict the ground truth stress data and how it varies based on specific stressors. The team will also develop a framework to deliver brief stress-reduction exercises that promote deep breathing, a proven effective and learnable stress reduction technique. The team will use iterative prototyping to develop novel, engaging mobile apps that use biofeedback, games, and music to support breathing exercises; these will be delivered by a multi-arm bandit-based recommendation system that considers the current context (predicted stress and stressors, time of day, particular computer activities) along with historical exercise adherence and results to suggest effective exercises. The stress

sensing models and intervention framework will be validated through a series of lab and field studies with information workers at a software company, collecting stress data in situ with ecological momentary assessment techniques, validated survey instruments for stress and affect, and interviews.

EAGER: From Genomics to Brain Science: What Makes Researchers Tick in Transdisciplinary Initiatives

Role: Principal Investigator

Sponsors: National Science Foundation (grant # SMA-1738163)

Performance Period: 07/15/2017 – 05/31/2018

Funding: \$60,408

Description: The transdisciplinary formation between biology and computing fostered the transformative achievement of decoding the human genome. Decoding the functionality of the human brain is similarly posed to usher in a new era of biomedical and technological advancements. The Brain Research through Advancing Innovative Neurotechnologies (BRAIN) initiative is a federally funded umbrella program aimed to streamline research efforts in brain science in the United States. The Human Brain Project (HBP) is a competitive initiative funded by the European Union, which shares the same goal with BRAIN but pursues different policies, organizational strategies and incentive structures. The result is different multilevel processes integrating people, ideas, scientific cultures, and institutions in the same transdisciplinary challenge. Examined together, these two projects offer a base for comparisons of the impact of science and innovation policy interactions on collaborations among scientists.

The project builds a dataset with funding and publication sources, as well as faculty databases to capture the interactions among scholars from various disciplines and ecosystems. Statistical and network tools identify patterns of collaboration and their evolution as a result of the BRAIN and HBP policy intervention. Qualitative feedback in the form of interviews from key players identified via the quantitative methods will support nuanced interpretations of the results and guide extensions and policy recommendations.

Residual Data Curation and Analytics for the Toyota Datasets

Role: Principal Investigator

Sponsors: Texas A&M Transportation Institute

Performance Period: 04/15/2017 – 12/31/2017

Funding: \$50,000

Description: The Toyota project led to significant scientific breakthroughs, such as the documentation of the mechanism that auto-corrects conflict in the presence of esoteric distractions (cognitive or emotional), but breaks down in the presence of physical distractions (texting) – *Scientific Reports*, May 2016. The project also carried out a number of comprehensive experiments to test physiological and driver performance data in conjunction with an innovative biofeedback countermeasure. Although these experiments have been completed under the Toyota project, their data harvesting and analysis is far from complete, due to the

enormity of the task. It is expected that meticulous curation and in depth analysis of the collected biofeedback datasets will lead to major discoveries, publications, and media exposure that will position TTI and the Toyota research team at the forefront of automotive and safety research. Therefore, TTI funds a supplemental effort by the Computational Physiology Lab to bring this line of research to its conclusion.

REU Site: Research Experience for Undergraduates in Data-Centric Computing

Role: Senior Personnel

Sponsors: National Science Foundation (grant # IIS- 1659755)

Performance Period: 02/15/2017 – 01/31/2020

Funding: \$360,000

Description: The REU site in the Department of Computer Science at the University of Houston (UH) introduces undergraduate students to Computational Data Analytics, an area of increasing national importance.

Reconstructive Surgery Resident Stress While Learning Novel Microsurgical Tasks

Role: Principal Investigator

Sponsors: The Methodist Hospital Research Institute

Performance Period: 07/01/2016 – 06/30/2017

Funding: \$8,686

Description: Stress has been defined in a number of ways. Most definitions of stress converge around disrupting a homeostatic balance, be it a psychological or physiological set point. For the purpose of this grant proposal we will define stress as an increase in arousal relative to baseline stress levels, which is the homeostatic set point. Physiological stress alters blood flow distribution, skin conductance, breathing rate, breathing rate, breathing function, and body movement, which can all be quantified and analyzed using a battery of tests that include novel technology, such as an E4 wrist sensor and Zephyr bioharness. Surgical training provides an excellent framework because it is challenging and there are substantial stakes for trainees. Surgical residents are under an enormous amount of pressure to perform newly acquired skills precisely and as quickly as possible. In this project, we will test a novel integrated suite of sensing and computational methods to unobtrusively quantify stress in a group of plastic surgery residents learning microsurgical techniques. We will use these tools to quantify and compare baseline stress levels and response to an acute stressor in experienced and inexperienced reconstructive surgery trainees. In this case, the acute stressor will be a standardized novel microsurgical task that residents must perform. This project will help us better understand the stress response in humans. We will gain information on how medical residents respond to learning new tasks early and late in their training. At a broader level, the proposed project is expected to shed light on how different stress phenotypes affect predisposition toward learning. We will use this information to develop methods to decrease resident stress and to develop the most effective resident training possible.

*Yes we can***Role:** Principal Investigator**Sponsors:** Arizona State University**Performance Period:** 07/01/2015 – 06/30/2016**Funding:** \$21,000**Description:** The Computational Physiology Lab will develop an app for benchmarking teenagers' physical and dexterity fitness levels. The app will be self-guided and involve several steps. Some of these steps will be semi-automated. The app will appear in the App Store and subsequently used by ASU and Mayo Clinic as they see fit for research and outreach purposes.*REU Site: Undergraduate Research Experience in Multimedia Data Analytics***Role:** Senior Personnel**Sponsors:** National Science Foundation (grant # IIS-1359199)**Performance Period:** 05/01/2014 – 04/30/2018**Funding:** \$360,001**Description:** The REU Site program has four main objectives:

- (1) Students will develop competency in scientific research, presentation, and writing skills.
- (2) Participants will produce meaningful research results during their summer program. These results will be written up in a format that is acceptable for publication in an appropriate conference or journal.
- (3) Participants will sustain and increase their interest in research careers after their on-campus summer through continuing contacts and research participation, and delivery of a presentation on their research.
- (4) Participants will learn to present and disseminate their research results.

*Toyota Safety Research Project***Role:** Principal Investigator**Sponsors:** Toyota Inc.**Performance Period:** 01/17/2014 – 01/17/2017**Funding:** \$563,130**Description:** This program explores two different approaches to detecting abnormal vehicle operation events, such as unintended acceleration, and will concurrently evaluate ways to reduce the likelihood of these events and assist the driver in recovering from them. The first approach involves monitoring driver workload and stress through an innovative thermal imaging techniques and via other physiological measures (such as heart rate and respiration rate). The second approach involves monitoring and analyzing vehicle based sensors to predict abnormal operation events. The vehicle-based sensors approach will be conducted using a statistical analysis of vehicle parameters and by developing a model of vehicle sensor data that includes consideration of driving context. Opportunities

for fusing the two approaches will also be explored. The findings from the two monitoring approaches will inform a third sequence of research activities, which will involve human factors testing to develop rapid and appropriate feedback mechanisms, warning/message systems, or vehicle-assisted responses to assist the driver. Selected countermeasures will be evaluated to find the most effective means of mitigating abnormal operation events, including unintended acceleration and other potentially hazardous driver-vehicle situations. Simulated, test track, and real-world naturalistic driving experiments, as well as existing datasets, will be used in these evaluations.

Massive Open Online Courses (MOOC)

Role: Principal Investigator

Sponsors: University of Houston

Performance Period: 10/01/2013 – 12/31/2016

Funding: \$24,000

Description: This program is about the preparation of a massive online course for Coursera: *Mobile Applications with iOS*.

EAGER: The Effect of Stress and the Role of Computer Mediation on Exam Performance

Role: Principal Investigator

Sponsors: National Science Foundation (grant # IIS-1249208)

Performance Period: 08/01/2012 – 07/31/2013

Funding: \$193,231

Description: This program uses a novel experimental and methodological framework to measure and understand the role of stress on student performance in exams. Criticality and computer-mediation define the two axes of the experimental space. Specifically, the planned experiments include bi-weekly exams that count for a small percentage of the grade versus midterm and final exams that count for a large percentage of the grade, alternately offered in paper and iPad forms. The methodology is characterized by unobtrusive measurements that span the genetic, physiological, and psychological levels.

Air Quality Mapping and Related Data Management

Role: Co-Investigator

Sponsors: Houston Endowment

Performance Period: 06/01/2012 – 05/31/2013

Funding: \$40,000

Description: The program aims to provide data management and web/iPhone interfaces of animated ozone maps superimposed on physical activity and other applications.

EESE: Experiencing Ethics

Role: Principal Investigator

Sponsors: National Science Foundation (grant # IIS-1135357)

Performance Period: 09/01/2011 – 08/31/2015

Funding: \$299,325

Description: This education project introduces novel science ethics coursework at the University of Houston (UH) that features three levels, Theoretical/Case Studies/Experiential. The theoretical level identifies and explains central moral issues and principles relevant to research ethics. This is followed by dialectic investigations of famous cases in science ethics. The coursework culminates with the experiential level, an ethics practicum with emphasis on topics of peer review and human/animal experiments – two cornerstones of modern research life.

Multi-Spectral Imaging for the Simultaneous Detection of Stress and Concealed Objects

Role: Principal Investigator

Sponsors: National Institute of Standards

Performance Period: 09/01/2011 – 12/31/2012

Funding: \$50,000

Description: The project aims to assess the potential and limitations of multi-spectral imaging for the simultaneous detection of stress indicators and concealed objects. This work addresses the need by law enforcement, criminal justice, security and related agencies to accurately and reliably identify a potential assailant and to further determine if this potential assailant is concealing a threat or other contraband.

REU Site: Undergraduate Research Experience in Computational Science

Role: Senior Personnel

Sponsors: National Science Foundation (grant # CNS-1062954)

Performance Period: 03/01/2011 – 02/28/2015

Funding: \$350,000

Description: This funding renews a CISE Research Experience for Undergraduates site focused on computational science at the University of Houston.

Remote Human Identification and Intent Determination from Thermal Imagery I

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 12/02/2010 – 06/02/2011

Funding: \$21,000

Description: This is a pilot program that aims to design imaging technology to identify individuals and determine their intent at a distance.

Spectral Imaging Sensor for Improved Biometric and Human Intent Analysis II

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 09/28/2010 – 09/30/2012

Funding: \$239,974

Description: This is Phase II of the program that involves the development of spectral imaging techniques and hardware for biometric analysis of human

subjects. It aims to producing a system that can determine harmful personnel intent in uncontrolled environments.

EAGER: Improving Human Engagement and Enjoyment in Routine Activities

Role: Principal Investigator

Sponsors: National Science Foundation (grant # IIS-1049004)

Performance Period: 09/01/2010 – 08/31/2011

Funding: \$159,068

Description: The program's premise goes against the popular belief that performing many tasks at once harbors danger. Quite the opposite in some cases, multiplexing an interesting task in a background-monitoring task can directly improve engagement and indirectly performance. This research may revolutionize practice in many critical professions (e.g., security guards) characterized by boredom.

Spectral Imaging Sensor for Improved Biometric and Human Intent Analysis I

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 11/13/2009 – 10/31/2010

Funding: \$36,000

Description: This is a pilot program that prepares the ground for the development of spectral imaging techniques and hardware for biometric analysis of human subjects. It involves the design of a system that can determine harmful personnel intent in uncontrolled environments.

Advanced Thermal Action Coding System (TACS)

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 09/22/2008 – 09/30/2010

Funding: \$502,249

Description: The program involves the design and development of methods that perform the traditional polygraph measurements of respiration activity, heart rate, and skin conductance in a contact free manner. These methods will be based on thermal imaging of the face and will be added to the periorbital and forehead channels already in existence.

Instrumentation Grant for Ubiquitous Computing Class

Role: Principal Investigator

Sponsors: Educational Technology - University of Houston

Performance Period: 08/24/2009 – 12/15/2009

Funding: \$24,503

Description: The grant further supports the development of an iMac-iPhone lab in support of the Ubiquitous Computing class.

*Instrumentation Grant for Ubiquitous Computing Class***Role:** Principal Investigator**Sponsors:** Educational Technology - University of Houston**Performance Period:** 08/18/2008 – 12/15/2008**Funding:** \$14,158**Description:** The grant supports the establishment of an iMac-iPhone lab in support of the Ubiquitous Computing class.*Do Nintendo Surgeons Defy Stress?***Role:** Principal Investigator**Sponsors:** National Science Foundation (grant # IIS-0812526)**Performance Period:** 08/01/2008 – 07/31/2011**Funding:** \$478,285**Description:** The program proposes a novel methodological framework to measure and understand the evolution of stress patterns in humans as well as determine their importance in phenotypes and performance. There is also no better experimental framework to perform a stress study, other than the case of humans engaging in challenging tasks with substantial stakes. The paradigm of surgeon training, which the program will pursue, perfectly fits this description.*REU Site: Research Experience for Undergraduates in Computational Science and Cybersecurity***Role:** Senior Personnel**Sponsors:** National Science Foundation (grant # CNS-0755500)**Performance Period:** 01/01/2008 – 12/31/2011**Funding:** \$310,001**Description:** This project renews a Research Experience for Undergraduates site focused on computational science and cybersecurity at the University of Houston.*Co-Design and Testing of Stress Quantification Experiments***Role:** Principal Investigator**Sponsors:** Methodist Hospital**Performance Period:** 10/01/2007 – 12/31/2010**Funding:** \$199,021.18**Description:** The project's objective is to understand and quantify stress during surgeon training and link it to performance.*Interacting with Human Physiology II***Role:** Principal Investigator**Sponsors:** National Science Foundation (grant # IIS-0741581)**Performance Period:** 08/01/2007 – 07/31/2008**Funding:** \$42,909**Description:** The project's objective is to identify a contact-free stress measurement method that can provably perform as well as the best contact method (i.e., GSR) in psycho-physiological studies.

Thermal Imaging – A Novel Non-Contact Method to Detect Apnea/Hypopnea During Polysomnography

Role: Co-Investigator

Sponsors: National Institutes of Health Clinical and Translational Sciences
Award (grant #UL1RR024148)

Performance Period: 01/15/2007 – 01/15/2008

Funding: \$50,000

Description: The project's objective was to evaluate the ability of the thermal imaging system:

- 1) To study respiratory pattern and respiratory rate in volunteers with no prior history of SRBD
- 2) To detect apnea and hypopnea in patients with obstructive sleep apnea syndrome

The usefulness of the thermal imaging system to detect apnea and hypopnea was compared with that of the thermistor.

ATHEMOS – Advanced Technology Development

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 12/15/2006 – 09/21/2008

Funding: \$556,073

Description: The goal of this project is to perform research that would improve facial tissue tracking in thermal infrared, develop advanced classification methods, include novel psycho-physiological channels in lie detection, pursue an aggressive program of experimental investigation, and automate the voice – thermal clip cross-indexing.

Integrated CAI Threat Assessment

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 12/15/2006 – 09/30/2007

Funding: \$292,702

Description: The goal of this project was to develop a multi-modal physiological sensing platform and test its performance in lie detection experiments.

Efficacy of Prototype Credibility Assessment Technologies

Role: Principal Investigator

Sponsors: Department of Defense

Performance Period: 12/15/2006 – 09/30/2007

Funding: \$350,000

Description: The goal of this project was to develop a new Automatic THERmal MONitoring System (ATHEMOS) and participate in multi-modality lie detection experiments.

*Hostile Intent***Role:** Principal Investigator**Sponsors:** Department of Homeland Security**Performance Period:** 10/09/2006 – 10/31/2007**Funding:** \$135,000**Description:** The goal of this project was to research psycho-physiological data produced by the SUNY Buffalo Communication Lab in a large scale deception experiment.*Experimental Thermal Imaging Systems***Role:** Principal Investigator**Sponsors:** Department of Homeland Security**Performance Period:** 11/15/2005 – 05/15/2006**Funding:** \$586,683**Description:** The goal of this project was to develop two new ATHEMOS systems in support of research and experimentation to be conducted jointly with the Communication Lab in SUNY Buffalo.*Thermal Deception Detection Systems***Role:** Principal Investigator**Sponsors:** Department of Defense**Performance Period:** 10/15/2005 – 10/14/2006**Funding:** \$955,692**Description:** The goal of this project was to pursue improvements on thermal Deception Detection (DD) systems in possession by the Department of Defense Polygraph Institute (DoDPI) through further research. Also, the program aimed to develop three next generation thermal DD systems.*Detection Research and Development Support***Role:** Principal Investigator**Sponsors:** Department of Homeland Security**Performance Period:** 09/26/2005 – 01/01/2007**Funding:** \$79,828**Description:** The goal of this project was to perform collaborative research with the Communication Lab in SUNY Buffalo to understand better the psycho-physiology of high stakes lying and improve the state-of-the-art in deception detection technology.*MRI: Acquisition of a Hybrid System and Research Infrastructure for Large-Scale Integration of Biomedical Data***Role:** Co-Investigator**Sponsors:** National Science Foundation (grant # CNS-0521527)**Performance Period:** 08/01/2005 – 07/31/2008**Funding:** \$900,000

Description: The goal of this project is to establish a state-of-the-art research facility, which will serve a large community of users with common interests in the areas of bio-signal analysis and bio-computation.

SCI: REU Site: Undergraduate Research Experience in Computational Science and Cybersecurity

Role: Senior Personnel

Sponsors: National Science Foundation (grant # OAC-0453498)

Performance Period: 03/01/2005 – 02/28/2009

Funding: \$270,434

Description: Two areas of increasing national importance, namely Information Assurance and Computational Science, are the foci of the Research Experience for Undergraduates (REU) site at the Department of Computer Science of the University of Houston.

Novel Thermal Imaging Systems and Methodologies for Next Generation Polygraphy

Role: Principal Investigator

Sponsors: DOD Polygraph Institute

Performance Period: 11/28/2004 – 08/28/2005

Funding: \$493,288

Description: The goal of this project was to procure several off-the-shelf and custom made components to design and implement two experimental Thermal Imaging Systems, as well as the conduct of relevant data collection and analysis for the Department of Defense Polygraph Institute (DoDPI).

Biomedical Imaging

Role: Principal Investigator.

Sponsors: Honeywell International

Performance Period: 11/01/2004 – 12/31/2005

Funding: \$50,000

Description: The project aimed to develop the next generation anatomical facial tracker, capable of locking on particular facial areas (e.g., periorbital, forehead, nasal, or major superficial vessels) and following them over time with high accuracy. The sensing modality was thermal imaging. The technology found applications in continuous and contact-free monitoring of a subject's vital signs.

Interacting with Human Physiology

Role: Principal Investigator

Sponsors: National Science Foundation (grant # IIS-0414754)

Performance Period: 08/01/2004 – 07/31/2008

Funding: \$640,169

Description: The project aims to add a new dimension in human-computer interaction (HCI), namely, to monitor the physiology of computer users on a continuous basis and take appropriate actions when warranted. The project aspires to use the abundant computing resources at home and the office in combination

with novel sensing, algorithmic, and interface methods to enhance the user's experience and at the same time create a new preventive medicine paradigm.

Collaborative Research: Capacity Expansion in Information Assurance

Role: Co- Investigator

Sponsors: National Science Foundation (grant # DUE-0313880)

Performance Period: 06/01/03 – 05/31/07

Funding: \$201,949

Description: The project sought to expand the capacity of Stony Brook University and University of Houston to produce high-quality professionals in information assurance and computer security that can make a definitive contribution towards the problem of protecting our nation's critical infrastructure.

Thermal Imaging Experimentation and Analysis for Deception Detection

Role: Principal Investigator

Sponsors: DARPA (grant # N00014-03-1-0622)

Performance Period: 04/15/2003 – 01/31/2005

Funding: \$99,482

Description: The objective of the project was to support thermal imaging experimentation and analysis for Deception Detection.

Thermal Facial Screening

Role: Principal Investigator

Sponsors: TSWG (subcontract # B09390131)

Performance Period: 03/01/2003 – 03/31/2005

Funding: \$301,000

Description: The objective of the project was to design, implement, and test a revolutionary Deception Detection prototype machine based on thermal imaging. In this direction, two major problems were addressed: a) automatic face registration and b) blood flow measurement at a distance.

Honeywell Laboratories Period (January 1997 – August 2002) - Total: \$3,900,000

Thermal Image Analysis for Biomedical Applications

Role: Principal Investigator

Sponsors: Honeywell Laboratories, Mayo Clinic, and DOD

Performance Period: July 1999 – August 2002

Funding: \$700 K

Description: The objective of the project was to develop the algorithmic, software, and hardware elements necessary for remote monitoring of the physiology at the surface of the human body. Dr. Pavlidis was leading a multi-organizational team encompassing the computer vision group at Honeywell Labs, a medical research group from Mayo Clinic, and a group of psychologists from the DOD Polygraph Institute. He had the original idea for the project and wrote a series of successful internal and external proposals to finance it. He invented a

method for extracting blood-flow rate information from raw thermal video data. He used this method to perform facial screening and detect deceit. His work in this area led to multiple patents, publications in pre-eminent scientific journals, and unprecedented media coverage.

Face Detection and Recognition in Unconstrained Environments

Role: Principal Investigator

Sponsors: Honeywell Laboratories and DOT

Performance Period: March 1998 – August 2002

Funding: \$500 K

Description: The objective of the project was to develop the algorithmic, software, and hardware elements for migrating face recognition technology from access control to surveillance applications. Dr. Pavlidis had the original idea for the project and he wrote a series of internal and external proposals to finance it. He was the inventor of the Triple Band Imager (TBI), an optical system that splits the scene light three ways: visible, upper near-IR, and lower near-IR beams. The TBI system capitalized upon some unique reflectance properties of the human skin in the respective bands for accurate face location. The system used its own near-IR light source and it was impervious to light and environmental changes.

Detection of Events for Threat Evaluation and Recognition (DETER)

Role: Principal Investigator

Sponsors: Honeywell Laboratories

Performance Period: June 1999 – August 2002

Funding: \$700 K

Description: The objective of the project was to develop the algorithmic, software, and hardware elements for detecting and tracking movements of people and vehicles in large open spaces and draw inferences as to the level of threat they may pose. Dr. Pavlidis had the original idea for the project and wrote a series of internal proposals to finance it. The project led to an advanced surveillance product by January 2002. The first grand scale DETER system became operational in 2002 for monitoring automatically movements across the length of a new oil pipeline (900 miles) in Central Asia.

Cooperative Camera Network (CCN)

Role: Principal Co-Investigator (in cooperation with Dr. V. Morellas)

Sponsors: Honeywell Laboratories and Federal Aviation Administration (FAA)

Performance Period: June 1999 – August 2002

Funding: \$1.2 M

Description: The objective of the project was to develop the algorithmic, software, and hardware elements for automated monitoring of designated individuals across an entire commercial complex (e.g. an airport). Dr. Pavlidis had the original idea for the project and co-wrote a series of internal and external proposals to finance it. A prototype version of CCN was installed at the Minneapolis International Airport on an experimental basis; it focused towards bolter detection and tracking.

Integration of Computer Vision Research into Academic Curriculum

Role: Industry Advisor

Sponsors: National Science Foundation

Performance Period: January 2001 – August 2003

Description: The objective of the project was to revamp the undergraduate curriculum in Computer Science through the experience gained from close interaction between academic departments and corporate labs. The emphasis was in the integration of computer vision research modules in undergraduate courses to better cater the needs of corporate R&D labs in skilled graduates. Dr. Pavlidis was part of the original team that wrote the proposal and served as member of the advisory board that directed the execution of the project among a dozen computer science departments and corporate labs.

Universal Performance Evaluation Tool

Role: Support Research Engineer

Sponsors: Air Force Research Laboratory (AFRL)

Performance Period: June 1996 – October 1999

Funding: \$ 800 K

Description: The objective of the project was to develop semi-automatic ground-truthing and evaluation tools in support of the Moving and Stationary Target Acquisition and Recognition (MSTAR) program of DARPA. Dr. Pavlidis designed and developed semi-automated target delineation tools for SAR imagery. He also designed and developed performance evaluation algorithms for Automatic Target Recognition (ATR) systems. All the algorithms and the associated software are still in use by AFRL and some were incorporated into the programming environment Khoros.

7. *Facial Emotion Processing*, Invited Talk, **Society for Affective Sciences**, Bethesda, Maryland, April 2014
8. *Beware of Sympathetic Loping in Surgery and Beyond*, Invited Talk, **Media Labs, MIT**, Cambridge, Massachusetts, November 2013
9. *Beware of Sympathetic Loping in Surgery and Beyond*, Invited Talk, **National Institute of Standards**, Gaithersburg, Maryland, October 2013
10. *Beware of Sympathetic Loping in Surgery and Beyond*, Invited Talk, **Methodist Institute for Technology, Innovation, and Education**, Houston, Texas, September 2013
11. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **College of Engineering, Texas A&M University**, College Station, Texas, September 2013
12. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Digital Technology Center, University of Minnesota**, Minneapolis, Minnesota, April 2013

13. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Department of Electrical Engineering, University of California-Riverside**, Riverside, California, April 2013
14. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Department of Computer and Information Sciences, Rutgers University**, Piscataway, New Jersey, March 2013
15. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **IBM T.J. Watson Research Center**, Yorktown Heights, New York, March 2013
16. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Department of Computer Science, University of Houston**, Houston, Texas, March 2013
17. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Centre Interfacultaire en Sciences Affectives, University of Geneva**, Geneva, Switzerland, June 2012
18. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **NSF REU Summer Seminar Series, University of Houston**, Houston, Texas, June 2012
19. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Department of Computer Science and Engineering, University of North Texas**, Denton, Texas, May 2012
20. *Quantitative Stress Measurement and Procedural Competence*, Plenary Talk, **4th Annual American College of Surgeons Accredited Educational Institutes Postgraduate Course**, Houston, Texas, September 2011
21. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Department of Biology, University of Houston**, Houston, Texas, August 2011
22. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Plenary Talk, **3rd Annual International Conference on Computational Surgery**, Houston, Texas, January 2011
23. *Fast by Nature – How Stress Patterns Define Human Experience and Performance*, Invited Talk, **Department of Electrical and Computer Engineering, Old Dominion University**, Norfolk, Virginia, December 2010

24. *A Novel Way to Conduct Human Studies and Do Some Good*, Invited Distinguished Talk, **4th IGT-University of Nevada Engineering Symposium**, Reno, Nevada, May 2010
25. *Imaging Stress*, Keynote Talk, **4th International Symposium on Visual Computing**, Las Vegas, Nevada, December 2008
26. *From DNA to Facial Expressions: Detecting Stress Phenotypes and Genotypes*, Invited Talk, **Futures Conferences on Personalized Medicine, The Golf Coast Consortia, A Joint Program of Rice University, Baylor College of Medicine, University of Houston, University of Texas Medical Branch at Galveston, and University of Texas M.D. Anderson Cancer Center**, Houston, Texas, June 2008
27. *Computing Stress*, Invited Talk, **Computer Science Department, Texas A&M University**, College Station, Texas, April 2008
28. *Virtual Thermistor*, Invited Talk, **M.D. Anderson Cancer Center**, Houston, Texas, February 2008
29. *Harvesting the Thermal Cardiac Pulse Signal*, Invited Talk, **PharmaMedDevice**, New York, New York, April 2007
30. *Looking through the Human Face*, Invited Talk, **University of Technology Sydney**, Sydney, Australia, November 2006
31. *Looking through the Human Face*, Invited Talk, **IBM T.J. Watson Research Center**, Yorktown Heights, New York, June 2006
32. *Interacting with Human Physiology*, Invited Talk, **Computer Science Department, Texas A&M University**, College Station, Texas, October 2005
33. *Interacting with Human Physiology*, Invited Talk, **Keck Seminar at Rice University**, Houston, Texas, February 2005
34. *Estimation of Pulse, Blood Flow Rate, and Vessel Location from Thermal Video*, Invited Talk, **Computer Science Department, University of Pennsylvania**, Philadelphia, Pennsylvania, February 2004
35. *Estimation of Blood Flow Rate and Vessel Location from Thermal Video*, Invited Talk, **Chemical Engineering Department, University of Houston**, Houston, Texas, December 2003
36. *The Computer as a Guardian Angel*, Invited Talk, **Electrical and Computer Engineering Department, Democritus University**, Xanthi, Greece, June 2003

37. *The Computer as a Guardian Angel*, Invited Talk, **Computer Science Department, University of Crete**, Heraklion, Greece, June 2003
38. *Monitoring of Facial Blood Flow Through Heat Transfer Modeling and Its Application to Deception Detection*, Invited Talk, **Defense Advanced Research Projects Agency (DARPA)**, Washington D.C., August 2002
39. *Monitoring of Physiological Parameters Through Thermal Video Analysis and Its Applications to Biometrics and Medicine*, Invited Talk, **Houston University**, Houston, Texas, June 2002
40. *Thermal Facial Screening*, Invited Talk, **Oregon Health Sciences University**, Beaverton, Oregon, February, 2002
41. *Thermal Facial Screening*, Invited Talk, **University of Nevada at Reno**, Reno, Nevada, December, 2001
42. *Thermal Facial Screening*, Invited Talk, **Arizona State University**, Tempe, Arizona, November, 2001
43. *Deception Detection*, Invited Talk (jointly with Dr. J. Levine), **Defense Advanced Research Projects Agency (DARPA)**, Washington D.C., October 2001
44. *Detection of Events for Threat Evaluation and Recognition: DETER*, Invited Talk, **Wright State University**, Dayton, Ohio, August 2001
45. *Thermal Facial Screening*, Invited Talk, **Mayo Graduate School of Medicine**, Rochester, Minnesota, August 2001
46. *State-of-the-Art Security Prototypes*, Invited Presentation, **America's Security Expo**, Miami, Florida, July 2001
47. *Video-Based Monitoring and Surveillance: From the Laboratory to the Commercial World*, Invited Talk, **Philips Research Laboratories**, Briarcliff Manor, New York, March 2001
48. *Detecting Tumors, Physiological State, Human Faces, and Activity Patterns*, Invited Talk, Department of Electrical and Computer Engineering, **San Diego State University**, San Diego, California, December 2000
49. *Automatic Detection of Human Anxiety*, Invited Talk, **Defense Advanced Research Projects Agency (DARPA)**, Washington D.C., September 1999
50. *Automatic Detection of Disguised Faces*, Invited Talk, **Defense Advanced Research Projects Agency (DARPA)**, Washington D.C., July 1999

51. *Automatic Detection and Counting of Passengers in the High Occupancy Vehicle (HOV) Lane*, Invited Talk, Department of Computer Science, **Georgetown University**, Washington D.C., March 1999
52. *Modeling of Remotely Sensed Data for Military and Civilian Applications*, Invited Talk, Department of Electrical and Computer Engineering, **San Diego State University**, San Diego, California, January 1998
53. *Honeywell's Capabilities for the Dynamic Database Program*, Invited Talk, **Defense Advanced Research Projects Agency (DARPA)**, Washington D.C., April 1997
54. *Ongoing Research at the Artificial Intelligence, Robotics, and Vision Laboratory of the University of Minnesota*, Invited Talk, Department of Electrical Engineering, **Aristotle University**, Thessaloniki, Greece, July 1995

Research Awards

1. 2014 Faculty Research Award – for contributions in interdisciplinary research, **Computer Science Department, University of Houston**, October 2014
2. Winner of Poster Research Competition (my Ph.D. student Avinash Wesley) – for “Fast by nature – How stress patterns define human experience and performance”, **2010 Annual Meeting of The National Center for Human Performance**, Houston, Texas, November 2010
3. Winner of Graduate Research Competition (my Ph.D. student Yuichi Fujiki) – for “iPhone as a physical activity measurement platform”, **ACM Conference on Human Factors in Computing Systems (CHI)**, Atlanta, Georgia, April 2010
4. Poster Paper Award – for “Tissue tracking in thermo-physiological imagery”, **International Conference on Medical Image Computing and Computer Assisted Intervention (MICCAI)**, London, September 2009
5. Eckhard-Pfeiffer Endowed Professorship – for excellence in scholarship, **Computer Science Department, University of Houston**, October 2006
6. 2004 Faculty Research Award – for contributions in computational biomedicine research, **Computer Science Department, University of Houston**, May 2004
7. 2001 Technical Achievement Award – for contributions in visual surveillance research, **Highest Honorary Distinction in Honeywell Inc.**, December 2001

8. Laboratory Technical Award – for contributions in visual surveillance research, **Honeywell Laboratories**, November 2001
9. Individual Technical Award - for contributions in visual surveillance research, **Honeywell Laboratories**, February 2001
10. Individual Technical Award - for contributions in visual surveillance research, **Honeywell Laboratories**, January 1999
11. Individual Technical Award - for contributions in biometrics research, **Honeywell Laboratories**, December 1999
12. Individual Technical Award - for contributions in face detection research, **Honeywell Laboratories**, February 1999
13. Team Technical Award - for contributions in computer vision research, **Honeywell Laboratories**, August 1997
14. Fulbright Fellowship, **Greece**, August 1991 - June 1992
15. B.S. in Electrical Engineering Summa cum Laude, **Democritus University of Thrace, Greece**, June 1987
16. Honored Three Times by the **Greek Department of Education** with Highest Honors (1979, 1980, and 1981) for scholarly achievements during the High School education

Ph.D. and Postdoctoral Advisees (Placement)

T. Bourlai (University of West Virginia); P. Buddharaju (University of Houston-Clear Lake); M. Dcosta (Elizabeth City State University); J. Dowdall (Google), J. Fei (Halliburton); Y. Fujiki, (ChaiONE); Kyeongan Kwon (Ine4mation Insights); P. Lindner (University of Houston); A. Merla (University of Chieti, Italy); D. Shastri (University of Houston-Downtown); N. Sun (Trade Ranger); S. Taamneh (Hashemite University); I. Uyanik (Halliburton); A. Wesley (Halliburton); Y. Zhou (Huawei Technologies); Z. Zhu (Halliburton).

Departmental Service

1. **UH Conflict of Interest Committee, serves from 2012-**
2. **UH NSM College P&T Committee, serves from 2016-2018**
3. **UH CS P&T Committee – Chair in 2015-16, serves from 2015-2018**

4. **UH DOR Scientific Misconduct Committee**, *served from 2015-2016*
5. **UH CS Search Committee**, *served from 2013-2016*
6. **UH NSM College P&T Committee**, *served from 2010-2014*
7. **UH CS P&T Committee**, *served from 2010-2013*
8. **UH CS Graduate Studies Committee**, *served from 2009-2010*
9. **UH CS Faculty Search Committee**, *served as chair from 2009-2010*
10. **UH CS P&T Committee**, *served from 2006-2009*
11. **UH CS Faculty Search Committee**, *served from 2004-2006, elected chair in 2004*. During Dr. Pavlidis' tenure the application process went on-line and was streamlined. The result was successful hiring in shorter time.
12. **UH CS Curriculum Committee**, *elected member in 2003 and 2004*. Dr. Pavlidis was the primary author of the revised undergraduate curriculum and Ph.D. qualification system. The revised undergraduate curriculum brought the Department in par with the latest trends in the best schools around the country. One major change was the introduction of Software Engineering as a core course for undergraduates. The revised Ph.D. qualification system replaced exams with core courses. This is a statistically fairer and more streamlined evaluation system and it has increased Ph.D. student productivity at the learning and research levels. Dr. Pavlidis also proposed the introduction of multi-disciplinary courses as part of the Ph.D. course requirement. The proposal was accepted by the curriculum committee and the Department and is currently in effect. This change was long overdue and reflects the increased emphasis of applications in the computer science discipline.
13. **UH CS Industrial Committee**, *elected member in 2004*. Dr. Pavlidis has established a summer intern program between the Department and several industrial partners (Honeywell, IBM, GE, and Siemens).

Professional Service

Conference Activities

1. **Program Chair**, *17th IEEE International Symposium on Bioinformatics and Bioengineering (BIBE 2017)*, Washington D.C., October 23-25, 2017.

2. **Program Committee Member**, *7th International Conference on Affective Computing and Intelligent Interaction (ACII 2017)*, San Antonio, Texas, October 23-26, 2017.
3. **Program Committee Member**, *12th International Symposium on Visual Computing*, Las Vegas, Nevada, December 12-14, 2016.
4. **Program Co-Chair**, *11th International Symposium on Visual Computing*, Las Vegas, Nevada, December 14-16, 2015.
5. **Program Committee Member**, *IEEE Workshop on Biometrics*, in conjunction with CVPR 2014, Columbus, Ohio, June 23, 2014.
6. **Program Committee Member**, *IEEE Workshop on Biometrics*, in conjunction with CVPR 2013, Portland, Oregon, June 23, 2013.
7. **Associate Editor**, *2012 IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2012)*, Vilamoura, Algarve, Portugal, October 7-12, 2012.
8. **Program Committee Member**, *IEEE Workshop on Biometrics*, in conjunction with CVPR 2012, Providence, Rhode Island, June 17, 2012.
9. **Associate Editor**, *2011 IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2011)*, San Francisco, California, September 25-30, 2011.
10. **Program Committee Member**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2011, Colorado Spring, Colorado, June 25, 2011.
11. **Program Committee Member**, *IEEE Workshop on Biometrics*, in conjunction with CVPR 2011, Colorado Springs, Colorado, June 25, 2011.
12. **Industrial Chair**, *6th International Conference on Functional Imaging and Modeling of the Heart*, New York, New York, May 25-27, 2011.
13. **Industrial Chair**, *11th European Conference on Computer Vision*, Heraklion, Crete, Greece, September 5-11, 2010.
14. **Program Committee Member**, *IEEE Computer Society and IEEE Biometrics Council Workshop on Biometrics*, in conjunction with CVPR 2010, San Francisco, California, June 18, 2010.
15. **Honorary Chair**, *IEEE International Conference on Advanced Video and Signal Based Surveillance*, Genoa, Italy, September 2-4, 2009.
16. **Program Committee Member**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2009, Miami Beach, Florida, June 20, 2009.

17. **Program Chair**, *IEEE International Conference on Advanced Video and Signal Based Surveillance*, Santa Fe, New Mexico, September 1-3, 2008.
18. **Program Committee Member**, *IEEE Workshop on Biometrics*, in conjunction with CVPR 2008, Anchorage, Alaska, June 28, 2008.
19. **Program Committee Member**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2008, Anchorage, Alaska, June 27, 2008.
20. **Workshop Chair**, *IEEE Workshop on Physiological Monitoring 24/7*, in conjunction with EMBC 2007, Lyon, France, August 22, 2007.
21. **Workshop Chair**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2007, Minneapolis, Minnesota, June 22, 2007.
22. **Industrial Chair**, *11th IEEE International Conference on Computer Vision*, Rio de Janeiro, Brazil, October 14-21, 2007.
23. **Special Sessions Chair**, *2007 IEEE Conference on Advanced Video and Signal Based Surveillance*, London, United Kingdom, September 5-7, 2007.
24. **Program Chair**, *2006 IEEE Conference on Advanced Video and Signal Based Surveillance*, Sydney, Australia, November 22-24, 2006.
25. **Program Committee Member**, *2nd International Symposium on Visual Computing*, Lake Tahoe, Nevada, November 6-8, 2006.
26. **Program Committee Member**, *9th European Conference on Computer Vision*, Graz, Austria, May 7-13, 2006.
27. **Program Committee Member**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2006, New York, New York, June 22, 2006.
28. **Program Committee Member**, *Video Proceedings of CVPR*, New York, New York, June 17-22, 2006.
29. **Program Committee Member**, *5th IEEE Symposium on Bioinformatics and Bioengineering*, Minneapolis, Minnesota, October 19-21, 2005.
30. **Program Committee Member**, *1st International Symposium on Visual Computing*, Lake Tahoe, Nevada, December 5-7, 2005.
31. **Honorary Chair**, *IEEE International Conference on Advanced Video and Signal based Surveillance*, Lake Como, Italy, September 15-16, 2005.

32. **Program Committee Member**, *Video Proceedings of CVPR*, San Diego, California, June 20-25, 2005.
33. **Program Committee Member**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2005, San Diego, California, June 20, 2005.
34. **Workshop Chair**, *IEEE Workshop on Medical Infrared Imaging*, San Francisco, California, September 1 2004.
35. **Program Committee Member**, *IEEE Computer Society Conference on Computer Vision and Pattern Recognition*, San Diego, California, June 20-25, 2005
36. **Program Committee Member**, *IEEE Workshop on Object Tracking and Classification beyond the Visible Spectrum*, in conjunction with CVPR 2004, Washington D.C., July 02, 2004.
37. **Chair**, *IEEE International Conference on Advanced Video and Signal Based Surveillance*, Miami, Florida, July 21-22, 2003.
38. **Program Committee Member**, *ACM Workshop on Biometrics: Methods and Applications*, Berkeley, California, November 8, 2003.
39. **Workshop Chair**, *IEEE Workshop on Computer Vision Beyond the Visible Spectrum: Methods and Applications*, in conjunction with CVPR 2001, Kauai, Hawaii, December 14, 2001.
40. **Program Committee Member**, *IEEE Workshop on Combined Research-Curriculum Development in Computer Vision*, in conjunction with CVPR 2001, Kauai, Hawaii, December 10, 2001.
41. **Chair, Biomedical Engineering Session 2: Bioimaging**, *2nd IEEE International Symposium on Bioinformatics and Bioengineering*, Washington D.C., November 5, 2001.
42. **Program Chair**, *2nd IEEE International Symposium on Bioinformatics and Bioengineering*, Washington D.C., November 4-5, 2001.
43. **Program Committee Member**, *IEEE Workshop on Applications of Computer Vision 2000*, Palm Springs, California, December 4-6, 2000.
44. **Chair, Biomedical Engineering Session 4: Bioimaging II**, *1st IEEE International Symposium on Bioinformatics and Bioengineering*, Washington D.C., November 9, 2000.
45. **Program Committee Member**, *1st IEEE International Symposium on Bioinformatics and Bioengineering*, Washington D.C., November 8-10, 2000.

46. **Workshop Chair**, *IEEE Workshop on Computer Vision Beyond the Visible Spectrum: Methods and Applications*, in conjunction with CVPR 2000, Hilton Head Island, South Carolina, June 16, 2000.
47. **Workshop Chair**, *IEEE Workshop on Computer Vision Beyond the Visible Spectrum: Methods and Applications*, in conjunction with CVPR 1999, Fort Collins, Colorado, June 22, 1999.

Selected Panel Participations

1. NSF/SCC review panel, 2017
2. NIH/NCI multiple review panels, 2015
3. NIH/NCI multiple review panels, 2014
4. NIH/NCI multiple review panels, 2013
5. NSF/HCC review panel, 2012
6. NSF/HCC review panel, 2011
7. NIH/NCI review panel, 2011
8. NSF/CCF review panel, 2010
9. NSF/Career review panel, 2008
10. NSF/HCC review panel, 2008
11. NSF/IIS review panel, 2004
12. NSF/SPS review panel, 2003

Reviewer Status (Selected Journals)

1. Computer Vision and Image Understanding
2. IEEE Robotics and Automation Magazine
3. IEEE Transactions on Affective Computing
4. IEEE Transactions on Biomedical Engineering
5. IEEE Transactions on Fuzzy Systems

6. IEEE Transactions on Pattern Analysis and Machine Intelligence
7. IEEE Transactions on Signal Processing
8. IEEE Transactions on Intelligent Transportation Systems
9. IEEE Transactions on Vehicular Technology
10. Machine Vision and Applications
11. Medical Image Analysis
12. Pattern Recognition Letters
13. Physiology and Behavior
14. PLOS One

Professional Memberships

1. Member of ACM (Association for Computing Machinery)
2. Senior Member of IEEE (Institute of Electrical and Electronics Engineers)
 - IEEE Computer Society
 - IEEE Engineering in Medicine and Biology Society
3. Member of the Technical Chamber of Greece

Career Profile

Research Career Profile

Eckhard-Pfeiffer Professor, Univ. of Houston, Computer Science Dept., Oct 2006 - Now
In recognition of his research and teaching excellence Dr. Pavlidis was awarded this prestigious endowed chair almost simultaneously with his promotion to full professor.

Professor, Univ. of Houston, Computer Science Dept., Sept 2006

Director and Founder of the Computational Physiology Lab. The lab has established itself as a world leader in computational physiology with a sustained annual rate of funding around \$1 M.

Associate Professor, Univ. of Houston, Computer Science Dept., Sept. 2002 – Aug. 2006
 Director and Founder of the Computational Physiology Lab. The lab's research is dedicated to computational biomedicine and biometrics with special emphasis on contact-free computation of vital signs and stress levels as well as the development of health games. The lab produced multiple research prototypes that are in experimental practice in various medical and psychology labs. One of these prototypes was showcased in the Nextfest exposition of futuristic technologies in San Francisco (May 14-16, 2004).

Sr Principal Research Scientist, Honeywell Laboratories, May 2001 – August 2002
 Director of the Computer Vision Laboratory. Leader of a group of seven scientists, engineers, and technicians. Responsible for the management, budget allocation, and road-mapping of the group. Chief technology designer for the advanced imaging and multimedia products and services of the Honeywell Corporation. Featured in a full honorary page in the 2001 Honeywell's Annual Report in recognition of professional excellence.

Principal Research Scientist, Honeywell Laboratories, May 1999 – April 2001
 Principal Investigator in numerous Government and corporate technical projects. Responsible for both the proposal and technical execution phases of each project. Initiator of a long-term cooperative research and development project between Honeywell Labs and Mayo Clinic. Recipient of the 2001 Technical Achievement Award (highest corporate distinction) for inventing and bringing into production an automated surveillance system in record time.

Senior Research Scientist, Honeywell Laboratories, July 1997 - April 1999
 Technical leader in numerous Government and corporate R&D projects. Inventor of several algorithms that were lauded by peer reviewers in engineering journals and led to successful products and patents.

Research Associate, Honeywell Laboratories, June 1996 - June 1997
 Support R&D engineer in the U.S. Air Force project UPET. Designer of an algorithm for target delineation in SAR imagery that was adopted for regular use by the Air Force Research Laboratory. Developer of the associated software that became part of the commercial programming environment Khoros.

Research Assistant, University of Minnesota, September 1994 - December 1996
 Co-designer of the Minnesota Robotic Visual Test-bed, a research project funded by the U.S. Department of Energy. Recipient of the prestigious Graduate School grant for doctoral research. The doctoral research was focused on handwriting recognition for multi-media devices.

Teaching Career Profile

Eckhard-Pfeiffer Professor: University of Houston, Computer Science Dept.

Advanced Statistical Methods, Spring 2017

Ubiquitous Computing (iPhone), Fall 2016

Advanced Statistical Methods, Spring 2016
Ubiquitous Computing (iPhone), Fall 2015
Advanced Statistical Methods, Spring 2015
Ubiquitous Computing (iPhone), Fall 2014
Advanced Science Ethics, Spring 2014
Ubiquitous Computing (iPhone), Fall 2013
Advanced Science Ethics, Spring 2013
Computational Physiology, Spring 2013
Ubiquitous Computing (iPhone), Fall 2012
Advanced Science Ethics, Spring 2012
Computational Physiology, Spring 2012
Ubiquitous Computing (iPhone), Fall 2011
Computational Physiology, Spring 2011
Ubiquitous Computing (iPhone), Fall 2010
Computational Physiology, Spring 2010
Ubiquitous Computing (iPhone), Fall 2009
Computational Physiology, Spring 2009
Ubiquitous Computing (iPhone), Fall 2008
Computational Physiology, Spring 2008
Ubiquitous Computing, Fall 2007
Computational Physiology, Spring 2007
Ubiquitous Computing, new course established by Prof. Pavlidis in Fall 2006

Associate Professor: University of Houston, Computer Science Dept.

Computational Physiology, new course established by Prof. Pavlidis in Spr. 2006
Multimedia Programming, Fall 2005
Infrared Imaging, Spring 2005
Software Engineering, Fall 2004
Information Assurance, new course established by Prof. Pavlidis in Spr. 2004
Multimedia Programming, new course established by Prof. Pavlidis in Spr. 2003
Infrared Imaging, new course established by Prof. Pavlidis in Spr. 2003

Teaching Assistant: University of Minnesota, Computer Science Dept.

Algorithms and Data Structures I, CS-3321, Spring 1994
Introduction to Object-Oriented Programming Using C++, CS-5113,
 Winter 1994
Computer Vision, CS-5561, Fall 1993
The Structure of Computer Programming, CS-3316, Fall 1993
Algorithms and Data Structures II, CS-3322, Spring 1993
Algorithms and Data Structures II, CS-3322, Winter 1993
Computer Vision, CS-5561, Fall 1992

Seminar Lecturer: Technical Chamber of Greece, Komotini, Greece

Continuing Education for Young Engineers, Seminar Series, Fall 1990

Computer Skills

Operating Systems

iOS, UNIX, Windows

Programming Languages and Environments

Swift, R, C#
